

Atol Aurora

Engineered for freedom

Atol Aurora

Engineered for freedom

Water, Snow, and land

Up and down, beyond the horizon, and even farther away! Flying is a wonderful way to explore the world – if you just have enough airfields available.

With Atol Aurora, you can take off and land on water, snow, or land, using proper runways or gravel strips. That's absolute freedom.

Carbon fibre meets plywood

The Atol Aurora is an LSA (Light Sport Aircraft), combining the luxury feel of a wooden boat with light, modern aerospace materials. It is made in Finland, a country of high-tech, thousands of lakes, and four wild seasons.

Powered by a reliable Rotax engine and equipped with the latest Garmin avionics, it is the ultimate amphibian airplane for adventures, serious missions, or training.
